DIGITAL COMPETENCE, DIGITAL EDUCATION, DIGITAL TRANSFORMATION, TEACHER

АННОТАЦИЯ:

The problem of training highly qualified teaching staff in the Russian North, which is capable of creating and effectively using promising educational technologies that take into account the specific conditions of work, study, life, national and cultural traditions of the region, is key to the innovative development of its scientific and educational environment and improvement of pedagogical activity. The article shows that working in the conditions of digitalization in educational sphere requires complex transformations both in the school system and in the system of pedagogical education under the influence of progressive digital technologies. Its practical implementation requires changing of goals, organizational forms and technologies of educational activities based on digital technologies, the development of productive strategies aimed at integrating the innovations created in the traditional educational process. The purpose of the article is to substantiate the necessity and timeliness of digital modernization of education, primarily in pedagogics, and ways of its implementation in the Republic of Sakha (Yakutia).
